

Helps keep mobile workers safe

AlertGPS

AlertGPS pinpoints your employee's location

Alert, locate, communicate, and respond to your mobile workforce with the push of a button.

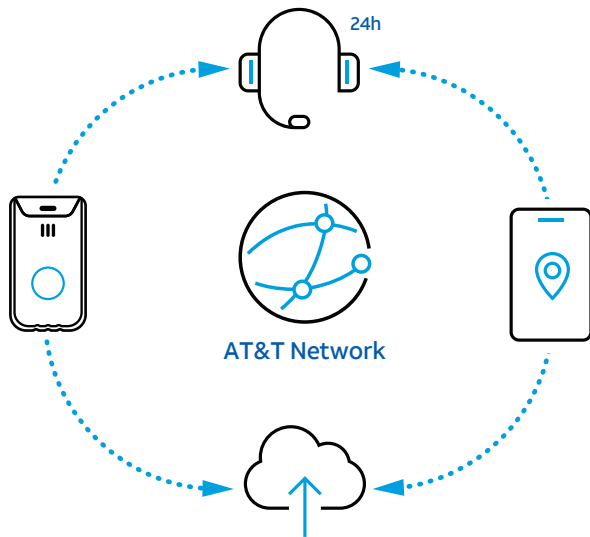

Mobile workers are performing tasks vital to your organization and the people they serve. Employees sometimes find themselves in vulnerable situations. Do your employees often work alone, in unfamiliar surroundings, or with people they don't know? Whether you are remote or a mobile worker is repairing broken equipment, cleaning an office, or caring for a patient in their home, you can help keep your remote worker safe with an easy-to-use device that allows them to quickly call for help when they need it. Give them the security and reassurance of AlertGPS.

Solution defined

AlertGPS is a discreet, lightweight, wearable device. With one push of a button, AlertGPS pinpoints your employee's location. Location is captured and transmitted to the response center for assistance. A live agent answers the call—opening a two-way conversation—to assess the incident. Agents are able to dispatch emergency services, if needed, while staying on the line until help arrive. Alerts are simultaneously sent to designated members of your team to provide situational awareness. Additionally with built-in fall detection capability, the response center knows when someone falls—automatically triggering an alert and response.

Potential Benefits

- Helps enable a better response with detailed threat and alert information
- Location proximity even on the move with GPS accuracy
- Near real-time situational awareness with interactive 2-way voice
- Customizable features within the solution with detailed threat and alerts for your team
- 24/7 Safety Concierge
- Easy to use device for all your mobile workers

Response center

Professionally trained agents can handle any type of emergency and can locate your employee's location using wireless technology. AlertGPS companion response center is available for your remote workforce any time for any reason.

Alert platform

With the AlertGPS cloud-based platform, you can send individual messages or group announcements via email or text. The customizable dashboard makes it easy to set alerts, generate reports, and geographically display your workforce current status. Go the extra mile to keep your remote workforce safe and provide them with extra peace of mind.

Features

- Intuitive button with **2-way voice** and hands-free speakerphone
- **Leverages GPS location**, Wi-fi, and cellular technologies for accuracy in-time of need
- Configurable dashboard **sends simultaneous messages to multiple designated recipients**
- **Enhanced privacy options and custom reporting** to meet your business needs
