

Simplify and protect your multi-site networking

with an all-in-one cloud solution with
AT&T Business Wi-Fi with Cisco Meraki

Features

- Unified visibility and control via a web-based portal
- Adaptable, cloud-based security protects against the latest threats
- Zero-touch deployment
- Automated network monitoring and alerts
- Fully managed solution plus 24/7 support
- Flexible and scalable to meet multi-site needs
- Live tools deliver powerful insight and analysis
- Troubleshooting to detect and resolve issues quickly
- Secure access controls, including two-factor authentication and role-based administration

Our fully managed service brings security and flexibility plus full application control to your business locations.

Modern business is all about staying connected and being productive. That means supplying employees and guests with faster, reliable Wi-Fi access. The network you create has to be secure, simple, and cost effective. It also needs to be flexible enough to meet your needs as your business grows.

AT&T Business Wi-Fi with Cisco Meraki helps free businesses of all sizes from the complexity of building, managing, and securing their own wireless network—bringing faster, reliable, and highly secure Wi-Fi to multi-site business locations. It also provides both flexibility and scalability to meet future business needs.

A flexible, all-in-one solution

AT&T Business Wi-Fi with Cisco Meraki is an ideal solution for businesses seeking robust, scalable, and cost-effective Wi-Fi connectivity for multiple locations that is also simple. We deliver highly secure, Wi-Fi 6 enabled technology with the added benefit of Software-Defined Wide Area Network (SD-WAN) capabilities should you need it and a strongly-secured cloud-based infrastructure.

As your trusted managed services expert, we provide you with the service and support your business needs to stay connected while you maintain control over your wireless equipment and hardware. Not only does this make operations more efficient, it also helps reduce your operational spending and resources. This enables IT staff to focus on mission-critical tasks.

Our web-based portal makes it easy to monitor performance and manage wireless access points, switches, and appliances using a single dashboard. This includes tools to install applications, generate insight reports, and perform web-based diagnostics in near-real time. Administrators can access the portal to submit trouble tickets from almost anywhere so you don't need to be on-site.

Highly secure network management

AT&T Business Wi-Fi with Cisco Meraki is 100 percent cloud-managed with security that starts at the network, including unified threat management (UTM) tools like advanced malware protection, content filtering, and intrusion detection and prevention.

Out-of-band architecture separates user and admin traffic to reduce security breaches while public and private networks separate highly secure business data and communications from guests. Portal access is controlled using two-factor authentication (2FA) via SMS technology, strict password policies that include

mandatory periodic changes, Internet Protocol (IP) restrictions, and lockouts, plus role-based administration to prevent unauthorized changes or access.

Next generation technology and performance

Our network is built to support your increasing data demands as your business grows, scales, and transforms. Wi-Fi 6 capabilities improve efficiency and speed in today's ultra-connected business environments with bandwidth to support the growing number of Internet of Things (IoT) and smart devices we use every day.

Wi-Fi 6 brings high performance and low latency to high-density and high-traffic areas, enabling your sites to handle a higher volume of connected devices plus productivity tools like Bluetooth. Wi-Fi 6 optimizes energy usage to make devices more efficient and contains the latest Wi-Fi Protected Access 3 (WPA3) security protocol.

Hardware options

- SD-WAN / security appliances
- Wi-Fi 6 wireless access points
- Layer 2 and Layer 3 switches for mission-critical networks
- IP cameras for added security and visibility, including intelligent video monitoring

Powerful insight and troubleshooting

Understanding how your Wi-Fi network is being used and by whom enables you to improve operations, manage security policies, and provide an optimal experience for employees and guests. Our dashboard offers live tools that deliver near-real-time insight into performance, connectivity, device types, location-based data, and more. This enables you to identify traffic patterns, usage, and trends so you make the most of your connections while protecting your users.

24/7 network care and support

When we say fully managed support we mean it. In addition to proactive monitoring and 24/7 live support, our managed services experts are there for you, offering everything from site design to professional installation so you get up-and-running quickly.

We offer a range of connectivity choices, including AT&T Dedicated Internet and AT&T Wireless Broadband, plus purchase and lease equipment options to meet any size business or budget.

Get highly secure, fully managed Wi-Fi with AT&T Business Wi-Fi with Cisco Meraki.

Why AT&T Business?

See how ultra-fast reliable fiber, and 5G connectivity protected by built-in security give you a new level of confidence in the possibilities of your network. Let our experts work with you to solve your challenges and accelerate outcomes. Your business deserves the AT&T Business difference—a new standard for networking.
